Early Life and Inspiration

Born in London, England, in 1934, Jane Goodall's love for animals blossomed from a young age. Inspired by the stories of Tarzan and other animal adventurers, she dreamed of traveling to Africa and working with

wildlife. In 1957, at the age of 23, her dream came true when she arrived in Gombe Stream National Park, Tanzania, to study chimpanzees under the guidance of renowned anthropologist Dr. Louis Leakey.

Goodall's research methods were groundbreaking at the time. She observed the chimpanzees in their natural habitat, using innovative techniques such as giving them names and observing their behavior over extended periods. Her meticulous observations revealed a world of complex social interactions, tool use, and emotional expressiveness that had previously been unknown.

Groundbreaking Discoveries

Conservation and Advocacy

Beyond her groundbreaking research, Dr. Goodall has dedicated her life to wildlife conservation and the protection of chimpanzees. In 1977, she founded the Jane Goodall Institute, a global organization that promotes the

protection of chimpanzees and their habitats, conducts research, and educates the public about the importance of conservation.

Through her advocacy work, Goodall has raised awareness about the threats facing chimpanzees, including habitat loss, poaching, and the illegal pet trade. She has worked tirelessly to protect these endangered animals and ensure their future survival.
